# Social Media Feed System

## Using Core Java & OOP Concepts

---

### Abstract

The Social Media Feed System is a console-based Java application that simulates basic social media features such as creating posts, liking posts, and adding comments. The project is developed using Core Java and Object-Oriented Programming concepts. It helps students understand how social media platforms manage user interactions and content. The system displays posts in feed format along with likes and comments. This project improves understanding of classes, objects, encapsulation, ArrayList, and method interaction.

---

### Introduction

The Social Media Feed System is designed to demonstrate the working of a simple social networking platform. Users can create posts, like posts, and add comments. The project mainly focuses on applying OOP concepts in Java.

### Objectives

- Manage posts and comments
- Track likes on posts
- Apply OOP concepts
- Improve logical programming skills

### Features

- Create posts
  - Like posts
  - Add comments
  - Display social media feed
- 

### Scope

This project is suitable for beginners learning Java and OOP concepts. It can later be extended using database connectivity and GUI.

---

# System Requirements

## Hardware

- Computer with 4 GB RAM

## Software

- Java JDK
  - VS Code / Eclipse / IntelliJ IDEA
- 

# Methodology

1. Create user objects
  2. Create posts
  3. Like posts
  4. Add comments
  5. Display feed
- 

# Flowchart

Start → Create User → Create Post → Like Post → Add Comment → Display Feed → End

## Classes Used

### User Class

- userName
- likePost()
- commentOnPost()

### Post Class

- content
- likeCount
- comments
- incrementLike()
- addComment()
- displayPost()

## SocialMediaApp Class

- main() method
- 

## Implementation

The project contains User, Post, and SocialMediaApp classes.

- User class handles user interactions.
- Post class stores content, likes, and comments.
- SocialMediaApp controls the program execution.

## Sample Output

Social Media Feed

Post: Hello World Likes: 2 Comments:

- Nice post
  - Welcome
- 

## Future Enhancements

- Add database support
  - Add login system
  - Add GUI using Java Swing
  - Allow editing and deleting posts
- 

## Conclusion

The project successfully demonstrates Java OOP concepts through a simple social media application. It improves programming and logical thinking skills.
